Stratodesk Mission Statement

“Our goal is to provide the most powerful and simple to use VDI/cloud/DaaS endpoint software and management solution in the world!”

Emanuel Pirker, Founder and CEO of Stratodesk

NoTouch Desktop

The leading VDI endpoint solution on the market (Thin OS + management software)

- **Converts** PC and Laptops into smart, secure “zero-like” VDI terminals
- Offers all the benefits of **thin and zero client computing** out of the box
- **Easy to use** – incredibly flexible, feature rich, customizable, highly secure
- **Hardware and vendor agnostic** – widest desktop PC, laptop and thin client support ever
- **Scales infinitely** – ideal for small and medium businesses and large enterprises
- **Linux based- security built in** – no chance for malware and hackers
- **Citrix, VMware, and more** – support for any VDI, cloud, DaaS included
- **Enterprise ready, intuitive desktop management tool included**

NoTouch Desktop

- **NoTouch OS™**
 - Hardware agnostic small, full featured VDI OS aimed at
 - Repurposing existing enterprise PCs
 - Repurposing thin clients from any OEM vendors
 - Works with Raspberry PI (Citrix Ready Workspace Hub)
 - Selling to OEMs with NoTouch OS factory installed
- **NoTouch Center™**
 - Agile and flexible endpoint management solution
 - Available as stand alone solution or as part of the Stratodesk Virtual Appliance
 - Engineered with VDI IT administrators needs in mind
 - Configuration, Update, Inventory, Monitoring, etc.

NoTouch OS

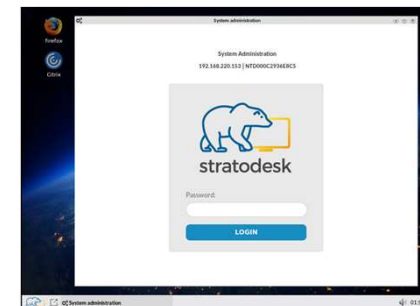

- Linux based OS image
 - Replaces the native OS installed on a device
 - **Runs on 98% of all legacy, current and future x86 desktop hardware** (PCs, laptops, Chromebooks, thin clients)
 - Various boot and roll out options (Live boot, USB, PXE, MSI Installer)
- **Vmware Horizon View Client** with PCoIP, Blast Extrem MultiMediaRedirection
- **Citrix Workspace App Client** with HDX, Storefront
- Supports all other major VDI/Cloud/DaaS Solutions
- Ultimate peripheral support
- Wireless and Multimonitor support
- USB Forwarding/USB Redirection
- Local and network printers, Smart Card support, Storage

NoTouch OS Benefits

- Unique combination of high-level driver support with “embedded” mentality
 - NOT a bloated desktop descendent of Linux
 - Read-Only OS image for extreme robustness with dedicated writeable areas
 - Use of newest kernel and device drivers
 - Small and robust GUI not dependent on newer computing desktops
- Runs all Linux applications at expense of image size only

NoTouch Center

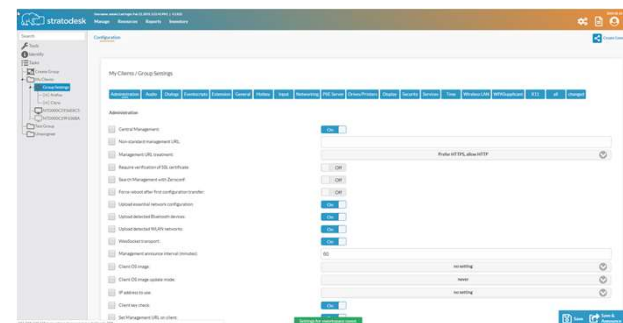

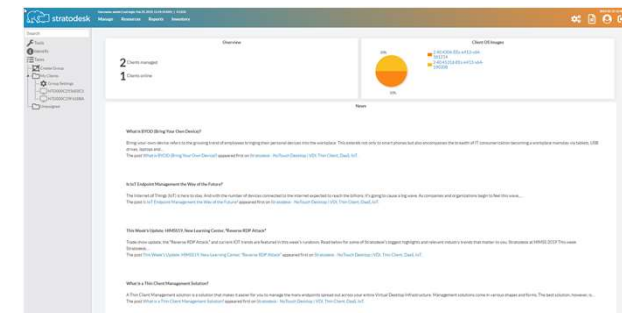

- **Enterprise grade, centralized, painless and intuitive management**
- Available as Virtual Appliance with PXE Server
- Inheritance of settings for fast configuration
- Multi-User support and Rights Management
- Real-time device monitoring and tactical overview
- Reporting tool
- Asset management and Peripheral Inventory
- Scripting Engine
- Customized Design and Look & Feel
- Secure HTTPS/SSL based communication – LAN, WAN, Internet VPN

NoTouch Center Benefits

- Configuration
 - Grouping
 - Multilevel, per-value inheritance
- Updates
 - Declarative, no-task automatic firmware management
- Peripheral inventory and tracking
 - Keeps track of monitors and other peripherals
- Device monitoring and asset management

Stratodesk Virtual Appliance

- Endpoint management of the future
- Alternative to a local installation of NoTouch Center
- Linux based
- Simple, fast and more comfortable administration of all endpoints
- Easier roll-out and deployment of images
- PXE-server included

The top screenshot shows the 'WELCOME' page of the Stratodesk Virtual Appliance. The navigation menu on the left includes: OS Images, Image Management, Management, NoTouch Center, File Store, Maintenance and Diagnostics, PXE Base, Configuration, Boot Menu Editor, WA Operations, Configuration, System Information, Certificates, and Firewall. The main content area has a 'WELCOME' heading and a message: 'The Stratodesk Virtual Appliance is your smart endpoint computing hub. NoTouch Center is loaded on this machine, ready for use. [Discover] [Click to ring bell] A PXE boot environment to prevent allowing to remote boot client machines. Client OS images are loaded here for both NoTouch Center and the PXE boot stack. Enjoy! This solution is designed to save you time and effort. Should you have questions, don't hesitate to contact us.'

The bottom screenshot shows the 'PXE CONFIG' page. It has a 'Global settings' section with fields for 'Timeout in seconds' (set to 5), 'Show boot prompt' (set to Always), 'Default OS image' (set to Operating System), and 'Local boot label' (set to local). Below this is an 'Image access policy' section with a dropdown set to 'Download'. The 'Boot menu' is set to 'Boot menu editor'. The 'Detailed image configuration' section has a table with columns for 'Image', 'User', 'Local', and 'Serial parameters'. The 'Local additions to PXE configuration' section has a text area for adding content to the pxe/linux.cfg file.

Positioning and Benefits

- Hardware agnostic and super efficient OS with management layer for VDI endpoints
 - Requires minimal hardware, fits into every existing x86 platform with 250meg bytes
 - Easily remotely install, update and manage over the LAN/ WAN
 - No endpoint Windows needed any more
 - Hardware is automatically detected and prepared for inventory
 - Quickly create administrator roles, thin client groups and policies
 - Control entire thin client network from your browser
 - NoTouch OS is not susceptible to Windows malware
 - Lower cost of administration services ownership
 - Highly secure and centrally manageable solution at a much lower price than Windows

Customer Benefits

- Introducing VDI clients to an enterprise typically increases complexity! (A new OS, a new user experience, a new management suite, etc.)

BUT

- NoTouch Desktop decreases VDI/DaaS complexity by
 - replacing the assortment of various operating systems and unique versions installed on PCs and thin client devices.
 - replacing “unmanaged” and degraded Citrix or VMware client only Windows installations
- With No Touch Desktop customers save on licensing costs and administration costs and effort

Hardware Compatibility

- **NoTouch runs on 98% of all legacy, current and future x86 desktop hardware**
 - PCs
 - Laptops
 - Thin clients
- Minimal hardware requirements
- Fits into every existing x86 platform
- No vendor lock-in
- Same look and feel on all devices
- Different kernel versions of NoTouch ensure optimal device performance and ultimate peripheral support

Thank you!
